Testimonial - RemNOx

To Whom It May Concern

3rd Oct 2023

I initially came across RemNOx in early 2022, and decided to try it on my own personal vehicle. I am a specialist in Decarbonising engines and I run a network of vans that have the latest DPM decarbonising equipment (CC16 PRO Carbon Clean, which uses Oxyhydrogen to "detox" customers engines).

I work in both the private and commercial sectors, and was very pessimistic regarding RemNOx's broad claims. However, having monitored the fuel consumption and a very noticeable change in the pitch of my engine and an exceptionally smooth drive experience, I immediately felt it prudent to offer it to many of my clients to see if their reponse was the same as mine. And I was glad to learn that their results were just as favourable. We are regularly saving around 8-10% on our fuel usage and we all noticed a continuous smooth performance with continuous DPF cleaning. In fact, there was even a decrease in black smoke and emissions that was instantly noticeable and I have also monitored a significant drop in DPM emissions.

I recently had my business van serviced, a Ford Transit, and it also had an MOT done which includes a emissions test to Euro 6 standards. To the absolute surprise of the tester, with the current Government testing equipment for road vehicles in the UK, the emissions were ZERO! I can only describe this as "miraculous".

I am currently supplying farmers who are now seeing huge differences in their tractors and plant machinery, both in the reduction of black smoke and cold start issues. The majority of agricultural and industrial machinery in the UK are now using B7-B10 Bio-diesel, and I am constantly coming across blocked filters and injectors. I have thus gone ahead and purposely put them onto RemNOx and the cold start issues, blocked injectors and blocked filters and emissions are now almost non existent! Issues with diesel bug and fuel stability in E10 ethanol blends is now also non existent.

I wish I had come across this product years ago. Being a simple "pour and go solution", its genius is its simplicity. I am therefore happy to recommend RemNOx to all my customers and friends, and to everyone else who uses cars, vans and agricultural vehicles; for them, RemNOx is a MUST!

Yours sincerely

Adam McLachlan
CEO (EngiClean Scotland)
